School counselling can help young people manage mental health issues despite costs, first-ever research into the subject reveals

For the first time in the UK, a large-scale study led by the University of Roehampton and published in The Lancet: Child & Adolescent Health* has revealed that school-based humanistic counselling** is effective and should be considered as a viable treatment option for children suffering from mental health issues despite considerable costs.

The research, which was conducted between 2016 and 2018 across 18 London schools and surveyed 329 children aged between 13 and 16 years olds at six-week intervals, found school-based humanistic counselling led to significant reductions in pupils' psychological distress over the long-term, compared to pupils who only received pastoral care. However, it was also revealed that this type of counselling comes at a cost, totalling between £300 and £400 per pupil.

With one in eight 5 to 19 year olds in the UK estimated to meet the criteria for a mental health disorder***, the research provides critical evidence for schools considering expansion of their mental health services.

The study found that pupils who were offered counselling services experienced significantly improved self-esteem, as well as large increases in their achievement of personal goals. The paper also calls for urgent evaluation of other mental health interventions for adolescents, such as Cognitive Behavioural Therapy (CBT) and classroom modules on emotional literacy.

The project lays important groundwork for further studies and explorations into the improvement of mental health provision for school children in the UK and costs, particularly with the ongoing impact that Covid-19 is having on young people’s mental health issues across the country.

Lead author of the paper, Mick Cooper, Professor of Counselling Psychology at the University of Roehampton, said: “Adolescence is a period of rapid change for young people and makes them particularly vulnerable to mental health problems, so studies like ours, which is the first large scale project of its type ever to be conducted in the UK, are vital to assess how mental health services can be improved in schools.

“Our analysis found that school-based humanistic counselling works and makes a difference to the well-being of pupils, albeit at a cost. However, it also highlighted the importance to continue to study the provision of mental health support in schools and how other services, such as CBT, can be employed to tackle these issues. There is pressing need for a diverse and comprehensive mental health provision and care for young people in schools across the UK, but it is essential that this is properly assessed to establish what works and what should be widely implemented to improve the mental well-being of young generations.”
Jo Holmes, Children, Young People and Families Lead at the British Association for Counselling and Psychotherapy (BACP) said: “Professionally delivered school counselling services are not cheap, and neither should they be. School counsellors are highly trained, experienced and skilled practitioners, often working with complex need and trauma linked to psychological distress. School counselling has the potential to take some of the short and long-term pressure off statutory provision, and can support young people as they transition to and from more specialist mental health services”.

“Counselling provides a safe space where young people can truly explore what is worrying them, setting their own goals, tailored to meet their individual needs, and helping them to ‘off-load’ and function better in their daily lives. It delves deeply into complex thoughts, feelings and emotions and is not a short-term sticking plaster.”

The ‘Effectiveness and Cost-effectiveness Trial of Humanistic Counselling in Schools (ETHOS)’ study was carried out in collaboration with the London School of Economics (LSE), Manchester University, the University of Sheffield and the University of Kent, as well as the British Association for Counselling and Psychotherapy (BACP), the Metanoia Institute, and the National Children’s Bureau (NCB). The work was supported by the Economic and Social Research Council [grant reference ES/M011933/1]; with additional funding to support the team from the University of Roehampton, the BACP, and the Metanoia Institute.

The full study can be accessed here.

** School-based humanistic counselling consists of one-on-one sessions with a counsellor employed by a school, and is based on a child-centred approach, with children talking about their issues and developing solutions with the aid of the counsellor, rather than therapist-led approaches, such as CBT.

Notes to editors

University of Roehampton

The University of Roehampton, London, is an established international higher-education institution providing a high-quality learning and research experience with the aim of developing personal growth and driving social change.
The University has a proud and distinguished history dating back to the 1840s and it was one of the first institutions in the UK to admit women to its colleges of higher education. This tradition of commitment to equality continues to be part of the ethos of the University, which has one of the most diverse and thriving communities of students in the UK; its 9,000 student body includes international students from over 146 countries.

Today the University is renowned for its broad range of expertise across teacher training, business, social sciences, the arts and humanities, as well as human and life sciences, with world leading and internationally recognised research in these fields.
